MISSISSIPPI STATE DEPARTMENT OF HEALTH

Juvare Project Lead

Mississippi Responder Management System Administrator

Volunteer Coordinator

Objectives

Mississippi State Department of Health

- Juvare Overview
- Overview of EMResource, EMTrack, eICS & Responder Management System
- Timeline of rollout for each product
- Registering for MRMS
- Questions
- Contact Information

Juvare

Juvare is a worldwide leader in incident preparation and response technology. Juvare's solution connects critical data into a common operating picture for situational awareness for healthcare facilities. Juvare solutions are used to efficiently and effectively coordinate planning, preparation, and response strategies to manage daily operations, crisis, and emergency events.

EMResource

EMResource is a healthcare resource management software system which provides information concerning resource availability, operations status, and crisis planning and response.

EMResource

- Collects information from healthcare facilities regarding daily bed tracking, daily COVID admissions, daily COVID-Flu questionnaire, and weekly HHS supplies.
- If facilities opt-in for NHSN registration, the COVID admissions, COVID-Flu questionnaire, and HHS supplies will automatically be submitted to NHSN without the duplicate of reporting for facilities.
- Provides insight into healthcare infrastructure capabilities.
- Supports exercises and live event management by allowing user to create events, notify individuals and collect critical information to respond to medical emergencies.
- User friendly dashboard for entering information.
- Ability for facilities to run reports.
- Mobile application feature.
- Ability to collect specific and critical information from facilities affected by emergency situations.
- Facilities can develop API's with Juvare to ease the burden for staff by eliminating duplication of reporting data elements.

EMResource & Application Programming Interface

- Scope: Implement Data Automation between Hospitals and EMResource
- What is it: Hospitals and Health Systems electronically send information to EMResource
- Why is it helpful:
  - Healthcare partners across the state rely on the information that is displayed in EMResource for reporting and situational awareness
  - It eliminates the potential for human error during data entry
  - It saves time and eliminates the need for manual entry
- How is it done:
  - Juvare provides the Partner Interoperability Guide, Data Map, and sample Code
  - JSON or XML
  - 100% controlled by client-client initiates and determines when and what data is shared
  - Please contact me at Kristie.Bobinger@msdh.ms.gov to complete a survey to pre-registration for data automation for EMResource

EMTrack

EMTrack is a tool that facilitates patient tracking from an initial encounter through the health care system. Through EMTrack, health care facilities, public health, emergency management, and first responders can track patients, receive alerts, and allocate resources in a variety of scenarios, including: daily EMS transports, mass casualty incidents, facility evacuations, and family reunification efforts.

EMTrack

- Customizable and user-friendly dashboard containing active incidents, regional summary of all clients, all clients in individual facilities, and summary of triage category.
- Ability to search for patients/people by filters. (ex: age, gender, current location, destination location, medication, ethnic background, complaint description, etc.)
- Ability to use portable devices, including cell phones, to rapidly scan-in patients on scene and track through triage, treatment, transfer and hospital reception.
- Create incidents such as hospital evacuations, MCI triage, or customizable incident specific events.
- Patient/triage details including name, age, gender, patient type, special needs equipment, medication supply, property, isolation status, files associated with the patient (screening form, trauma assessment, stroke assessment, STEMI assessment, etc.) and transportation details.
- Create reports including manifest, patient log, incident detail, policy acceptance, summary view, contaminated patient list, and incident summary report.
- Ability to manage and locate the person's property.
- Ability to locate a specific patient to determine where they are, both physically and with in the tracking process. Ability to add one or more search items to locate the record.
- EMTrack provides incoming patient notifications and history of transports.

eICS

eICS is an Incident Command System designed to enable effective and efficient incident management by integrating a combination of facilities, equipment, personnel, procedures, and communications operating within a common organizational structure.

eICS

- Ability for facilities and ESF-8 admin staff to create incidents for response.
- Create and assign positions to the ICS chart for the facilities.
- Contains 21 incident response guides with objectives and file documents. (ex: Chemical incident, fire, mass casualty incident, tornado, infectious disease, etc.
- Plan files for ICS positions with objectives for immediate response.
- Ability to upload Hazard Vulnerability Analysis for facilities.
- Ability to conduct a test or drill within the facility.
- Create an incident report and improvement plan for recovery.
- Streamline communications and workflow.
- Launched critical communications instantly and keeps stakeholders informed during an event.
- Notify individuals, teams, groups, gathering their availability, and making informed deployment decisions.
- Ability to use the smartphone application to perform critical event-related tasks such as initiating incidents and notifications, monitor availability, assign positions, and document events and tasks.

Assignment All Positions
Operational Period Immediate
+ Add Objective
Activate Emergency Operations Plan, Mass Casualty Incident Plan, Hospital Incident Management Team, and Hospital Command Center.
Incident Commander
Gather intelligence, information and likely impact from the sources providing event notification
Incident Commander
Establish operational periods, objectives, and regular briefing schedule. Consider use of Incident Action Plan Quick Start for initial documentation of the incident.
Incident Commander
Put on position identification
Incident Commander
Notify your usual supervisor and the Hospital Chief Executive Officer (CEO) of the incident, activation of the Hospital Command Center (HCC), and your assignment
Incident Commander
Determine which Command Staff need to be activated
Incident Commander
Obtain current patient census and status from the Planning Section Chief
Incident Commander
Determine the need to activate surge plans based on current patient status and injury projections
Incident Commander
If additional beds are needed, authorize a patient prioritization assessment for the purposes of designating appropriate early discharge
Incident Commander
If applicable, receive an initial hospital damage survey report from the Operations Section Infrastructure Branch and evaluate the need for evacuation
Incident Commander
Put on position identification
Public Information Officer
Notify your usual supervisor of your assignment

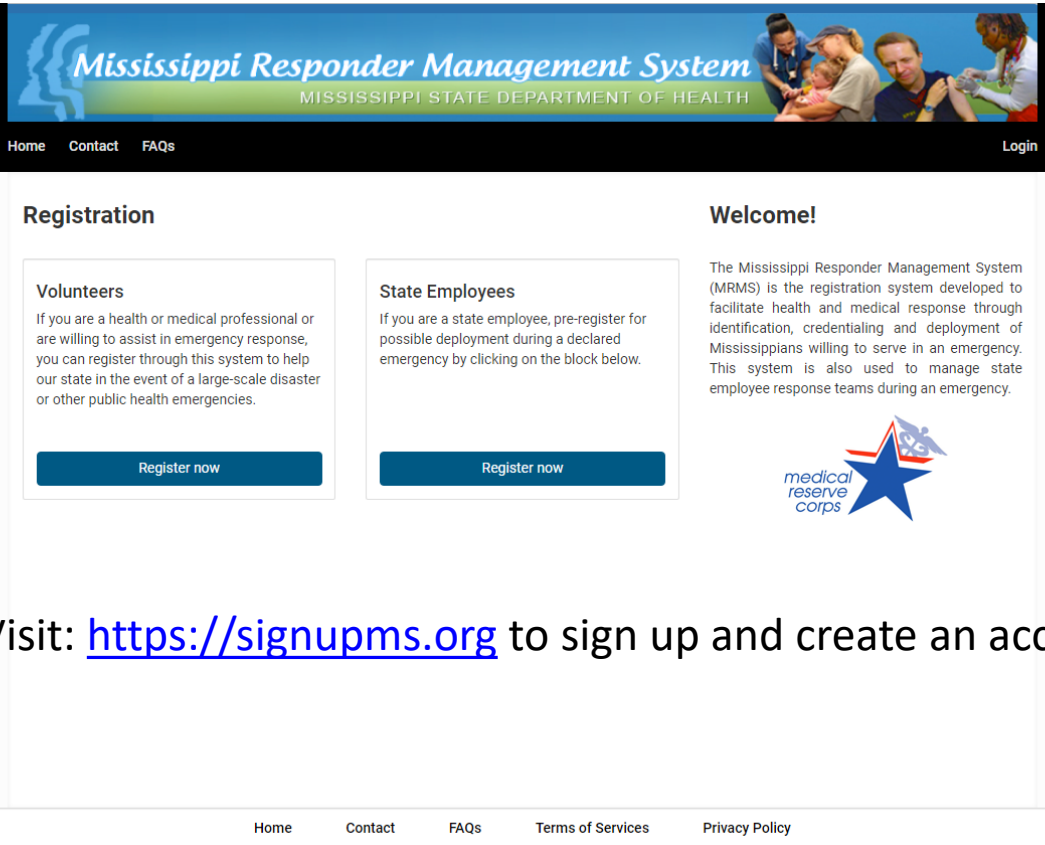
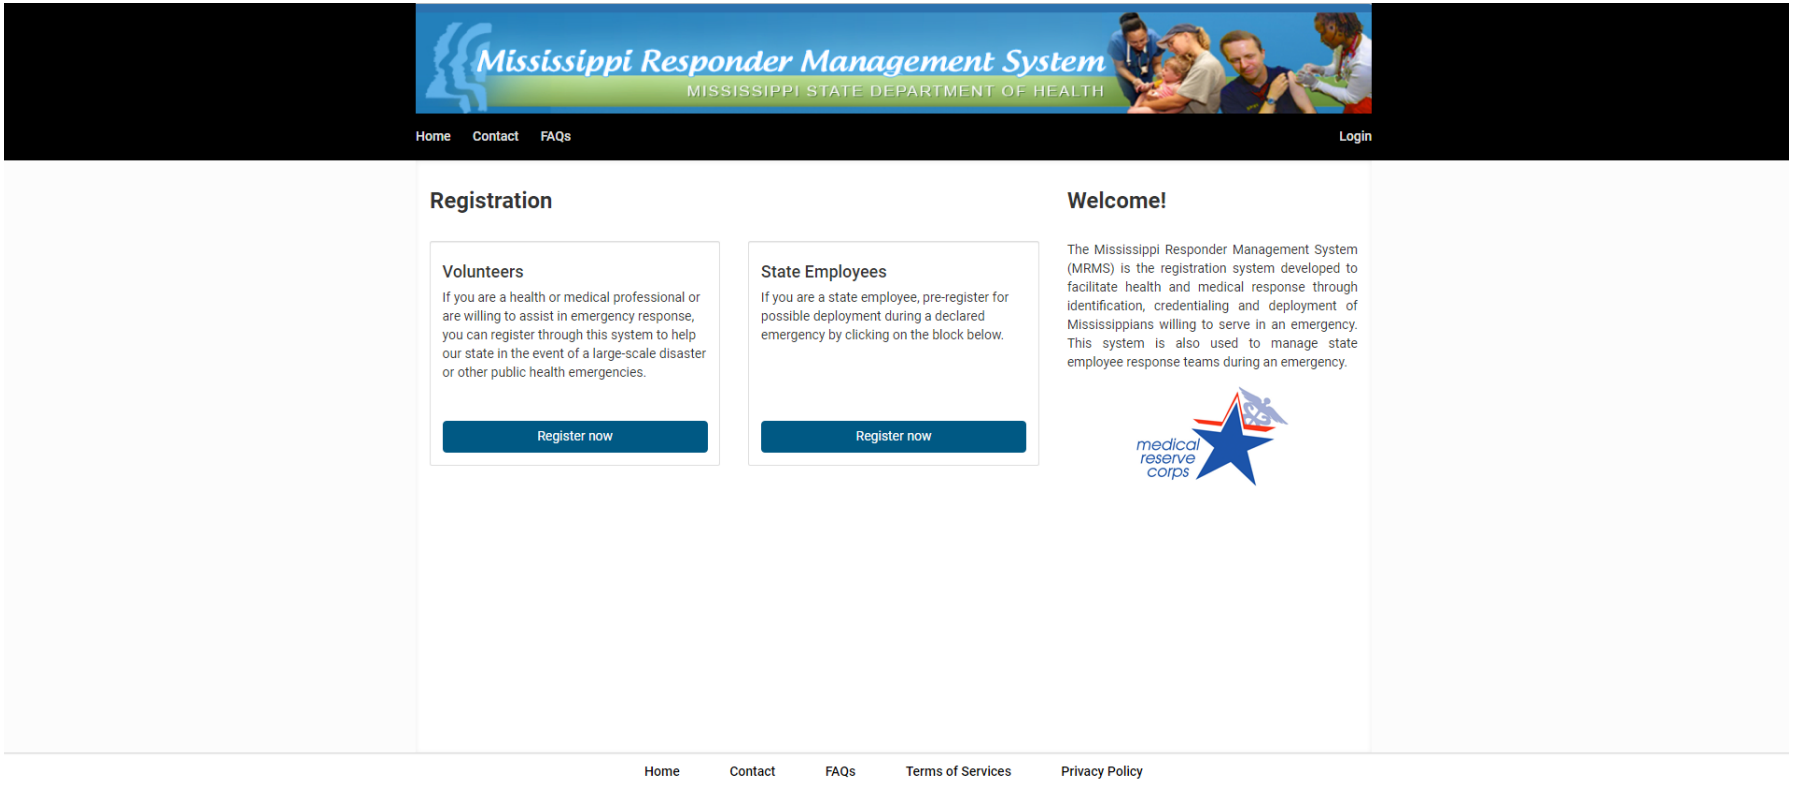
Mississippi Responder Management System

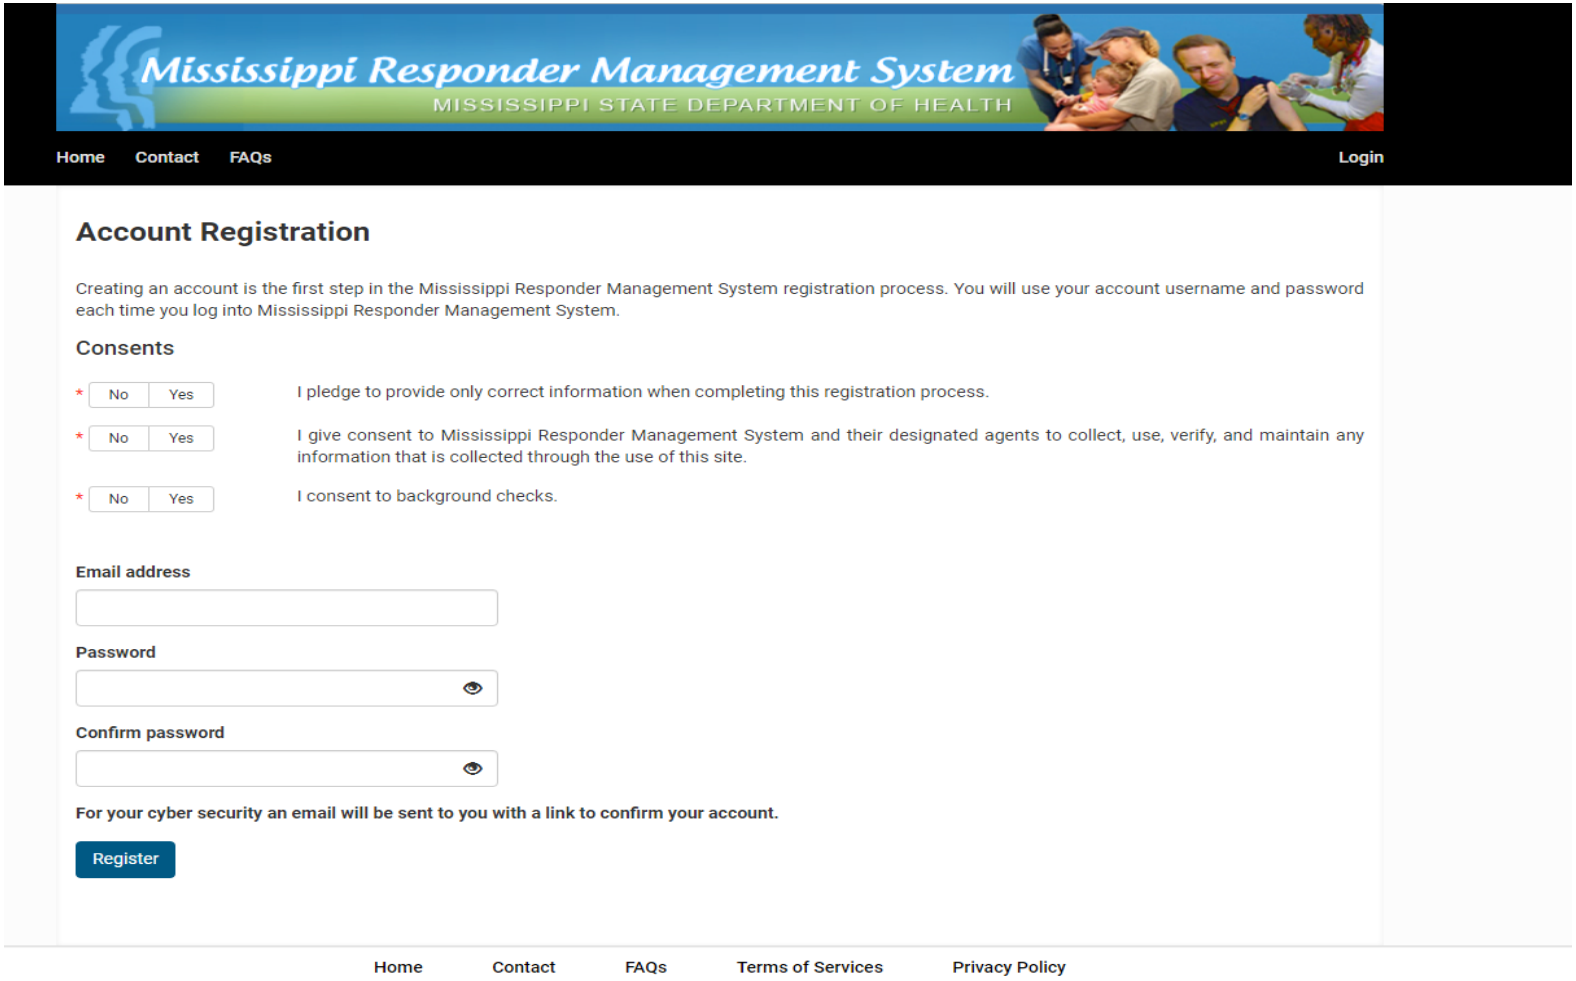
MRMS is the registration system developed to facilitate health and medical response through identification, credentialing, and deployment of Mississippians willing to serve in an emergency.



Visit: https://signupms.org to sign up and create an account.



Click register now to begin the registration process.



Answer the questions and complete all fields. Then select register.

No Reply <noreply@knowledge-center.com>
To: JamieWilson87@yahoo.com

Account Registration

Thank you for registering as a volunteer.

Your account needs to be confirmed before you can log in. Please click the link below.

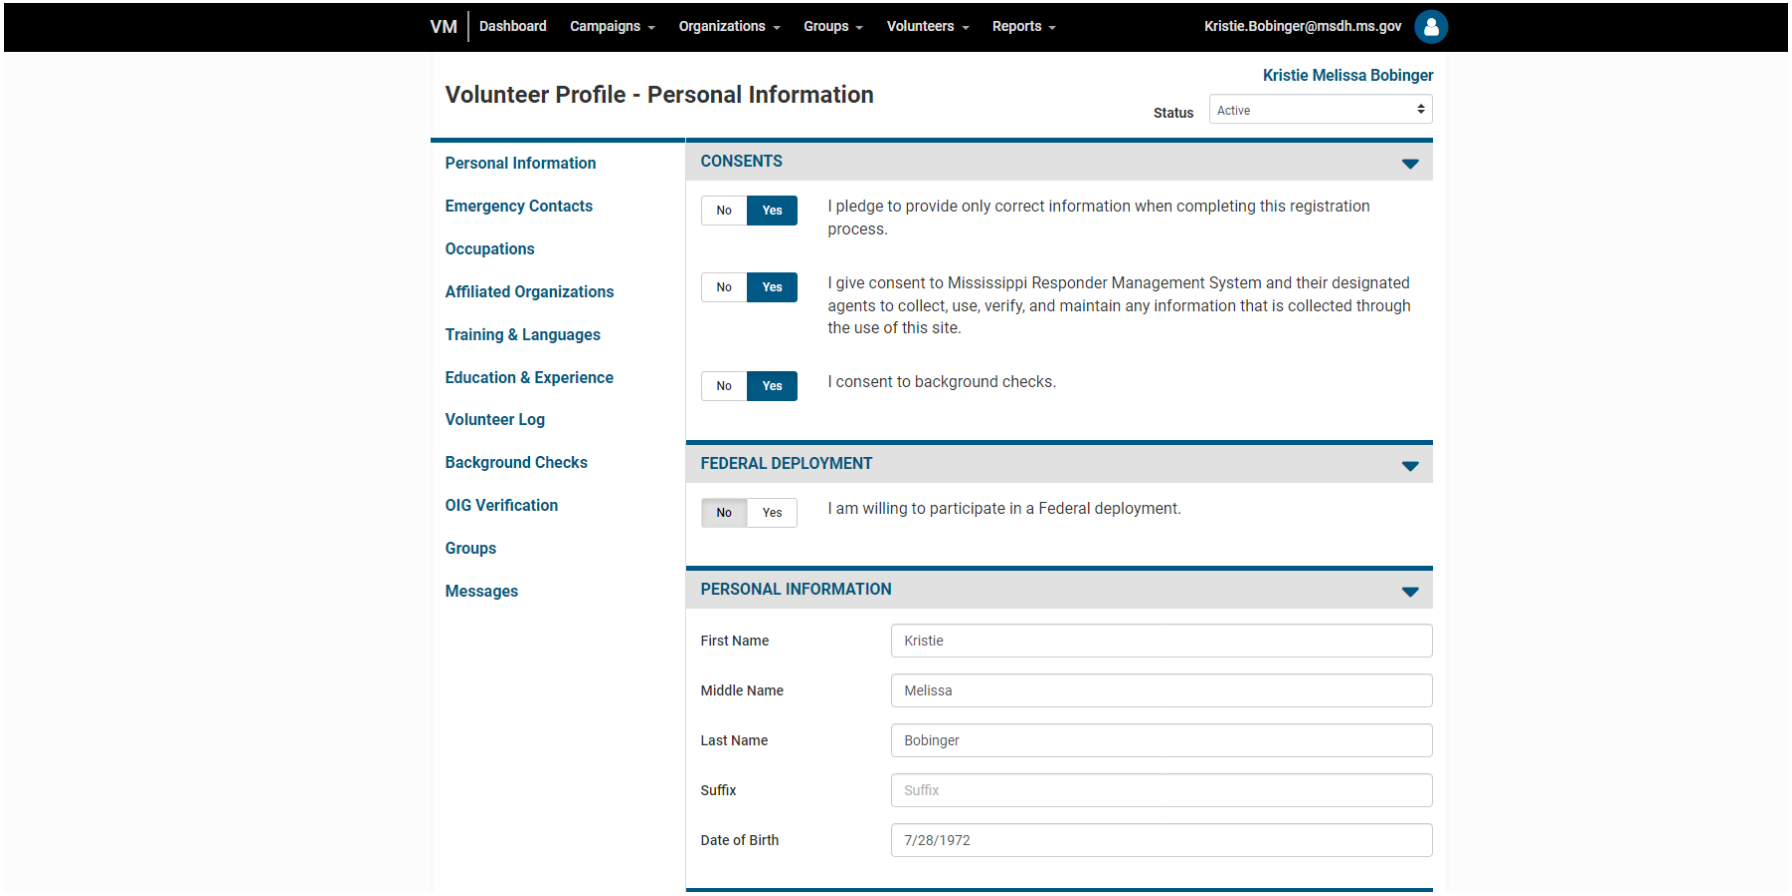
CONFIRM ACCOUNT NOW

NOTE: This link will be valid for 15 minutes.

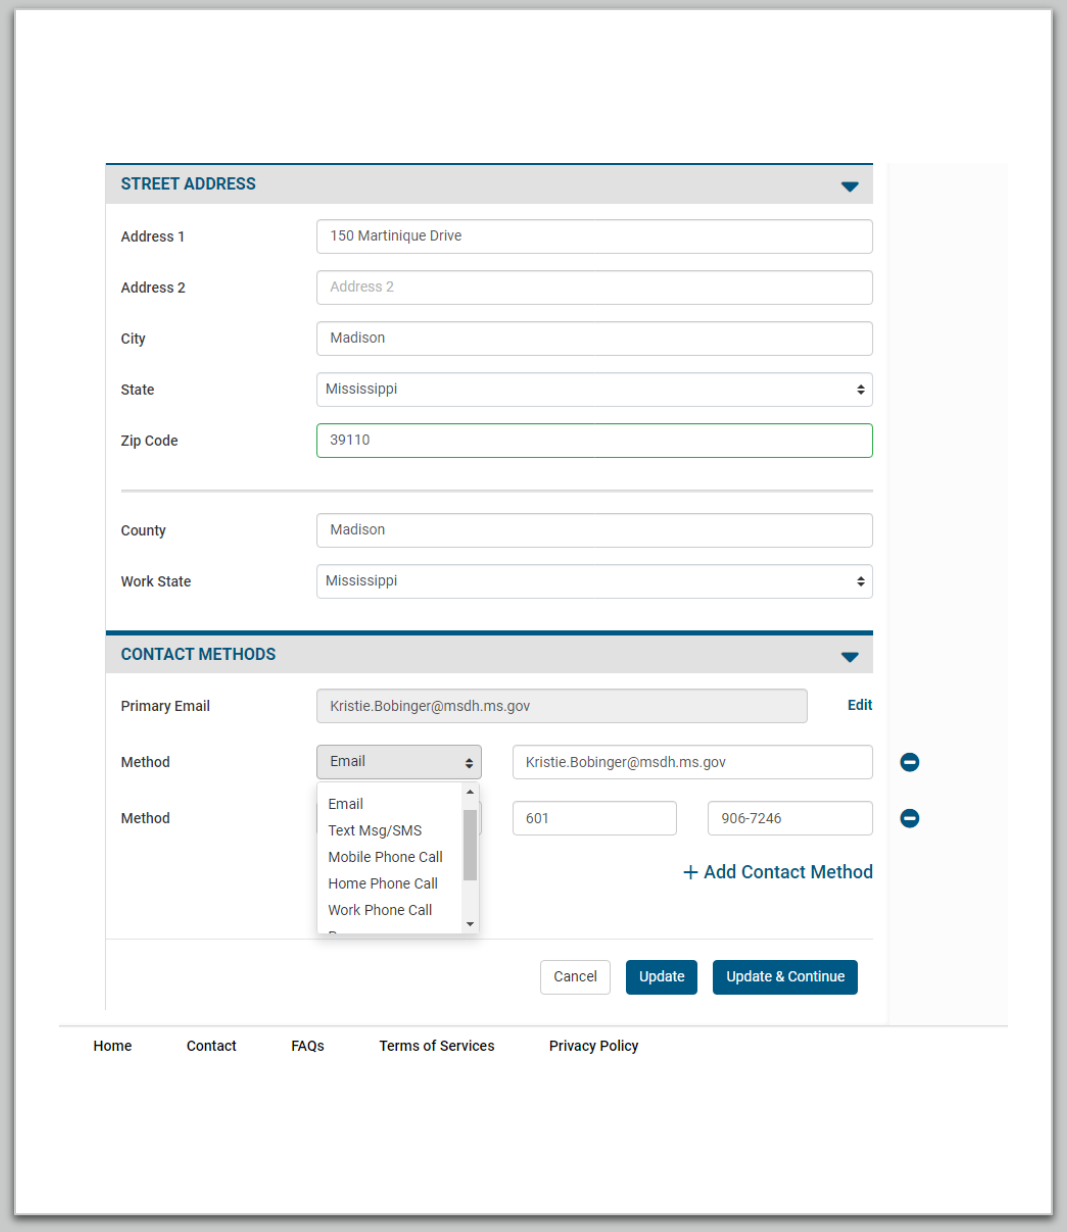
If you access this email after 15 minutes you must repeat the registration process REGISTRATION URL.

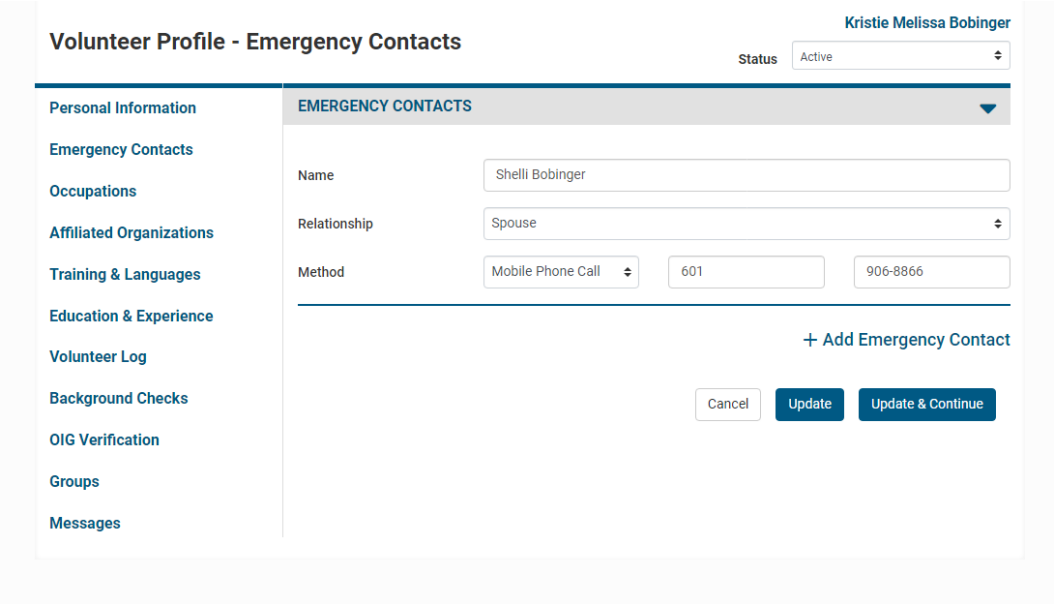
Select “Confirm Account Now” in the email to sign into your account.

Answer questions and complete personal information.

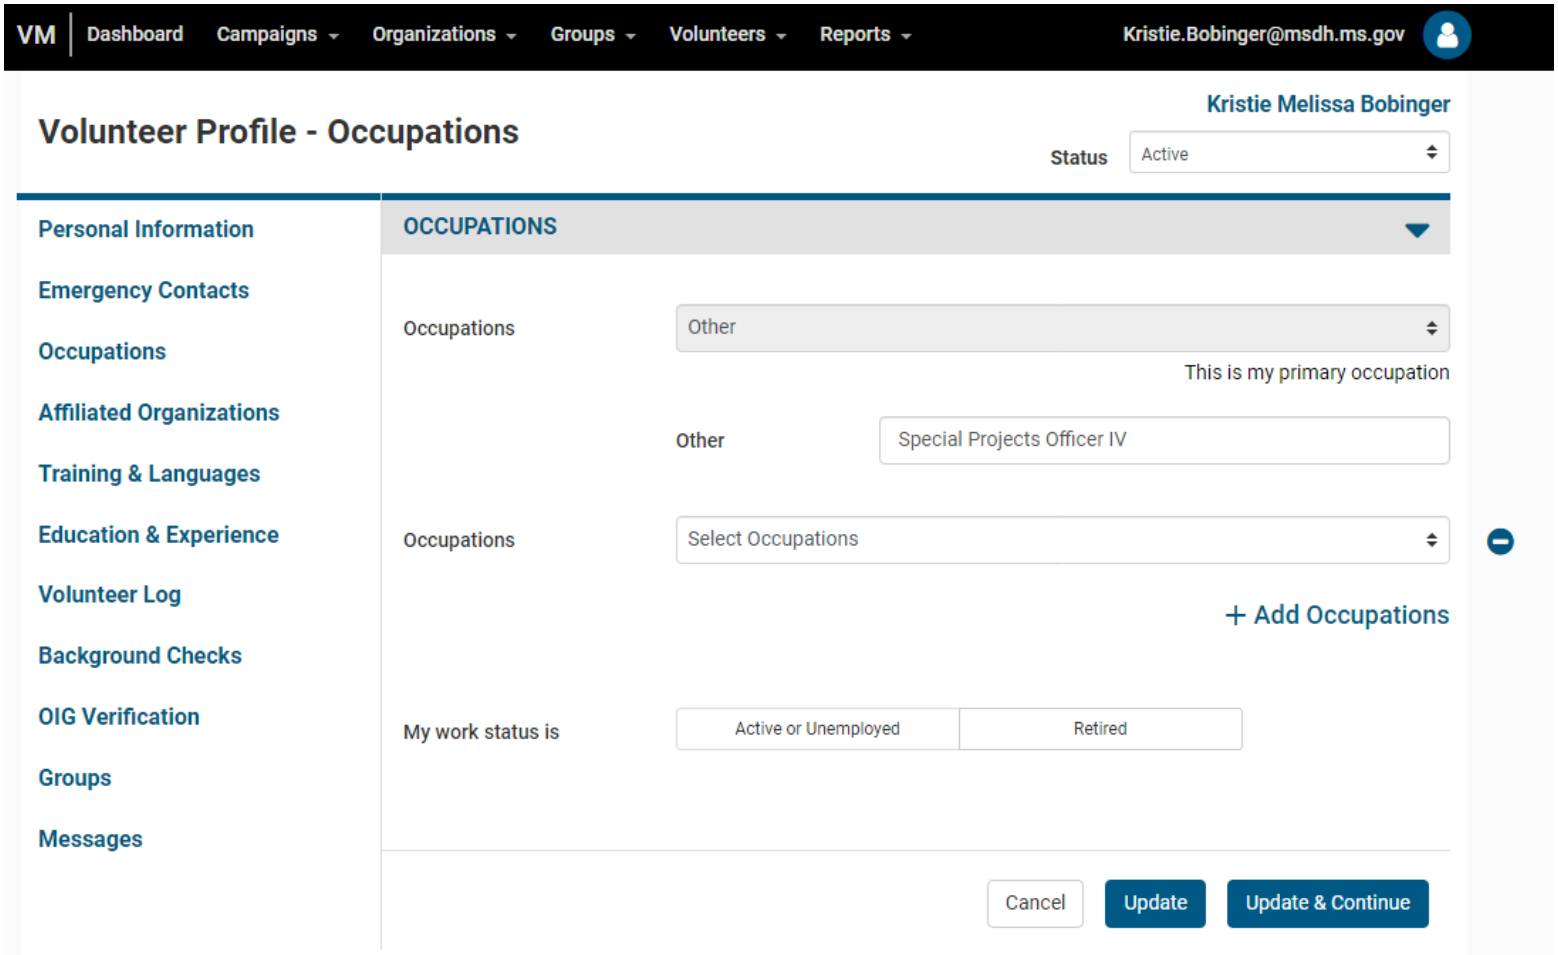


Complete address, city, zip code, country, work state, and contact methods. To enter multiple contacts select add contact method. Select update & continue.

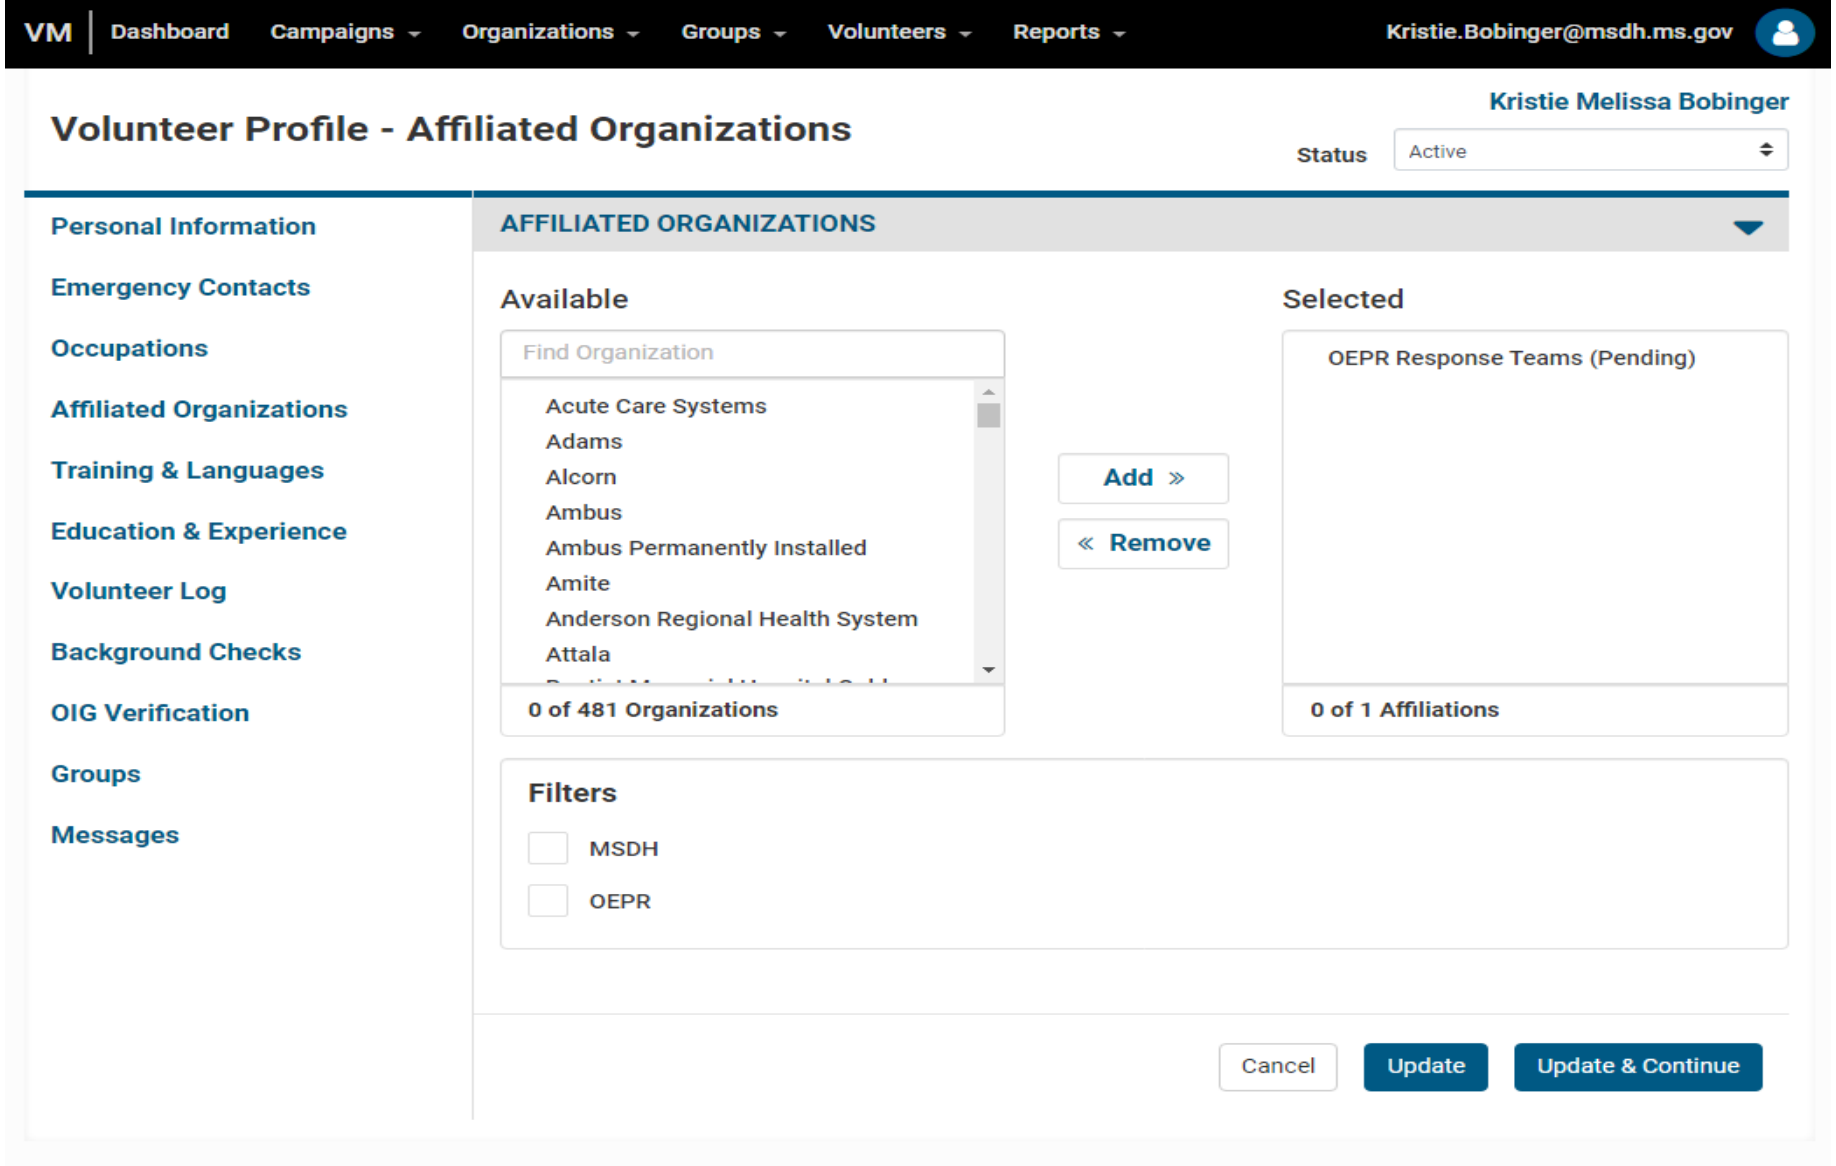




Complete emergency contact. Must have at least one contact.

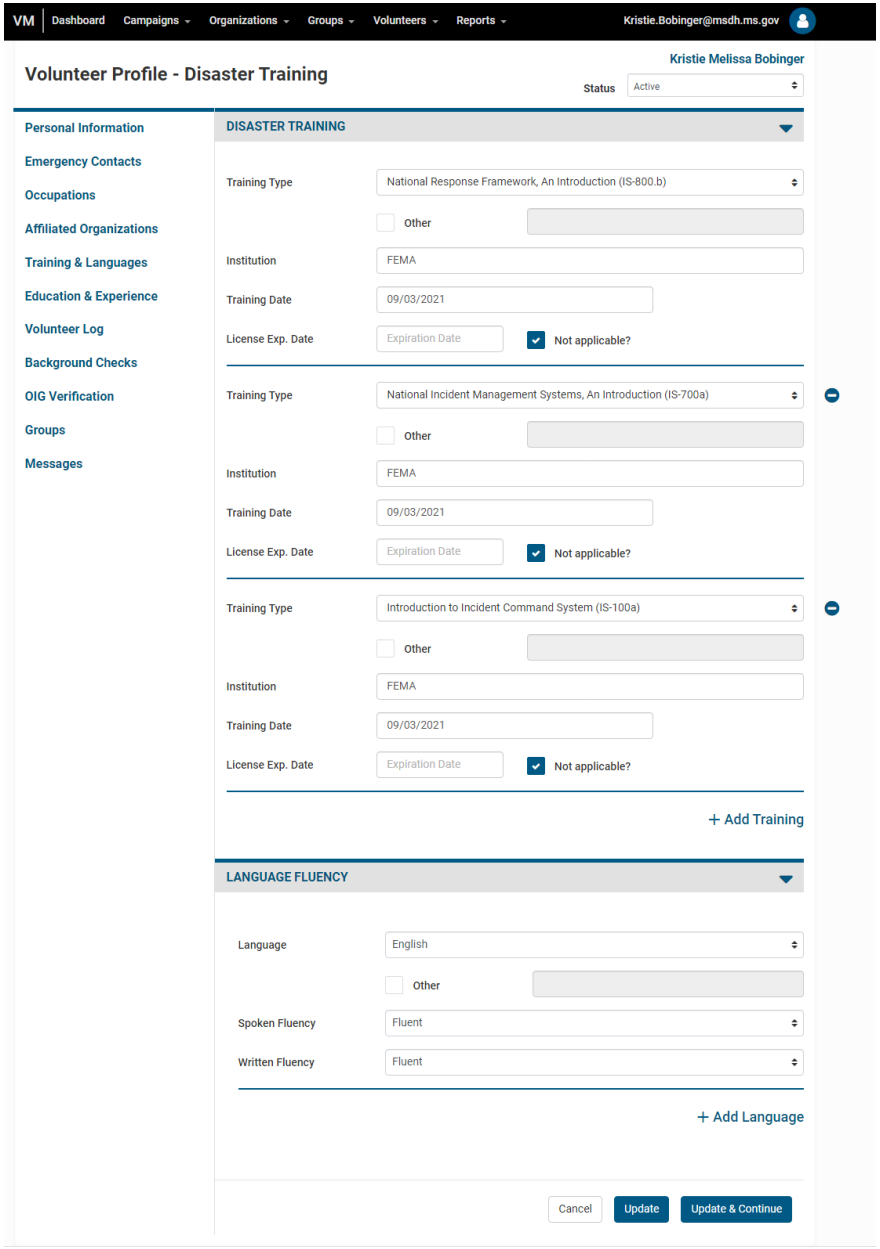


Complete occupation and work status.

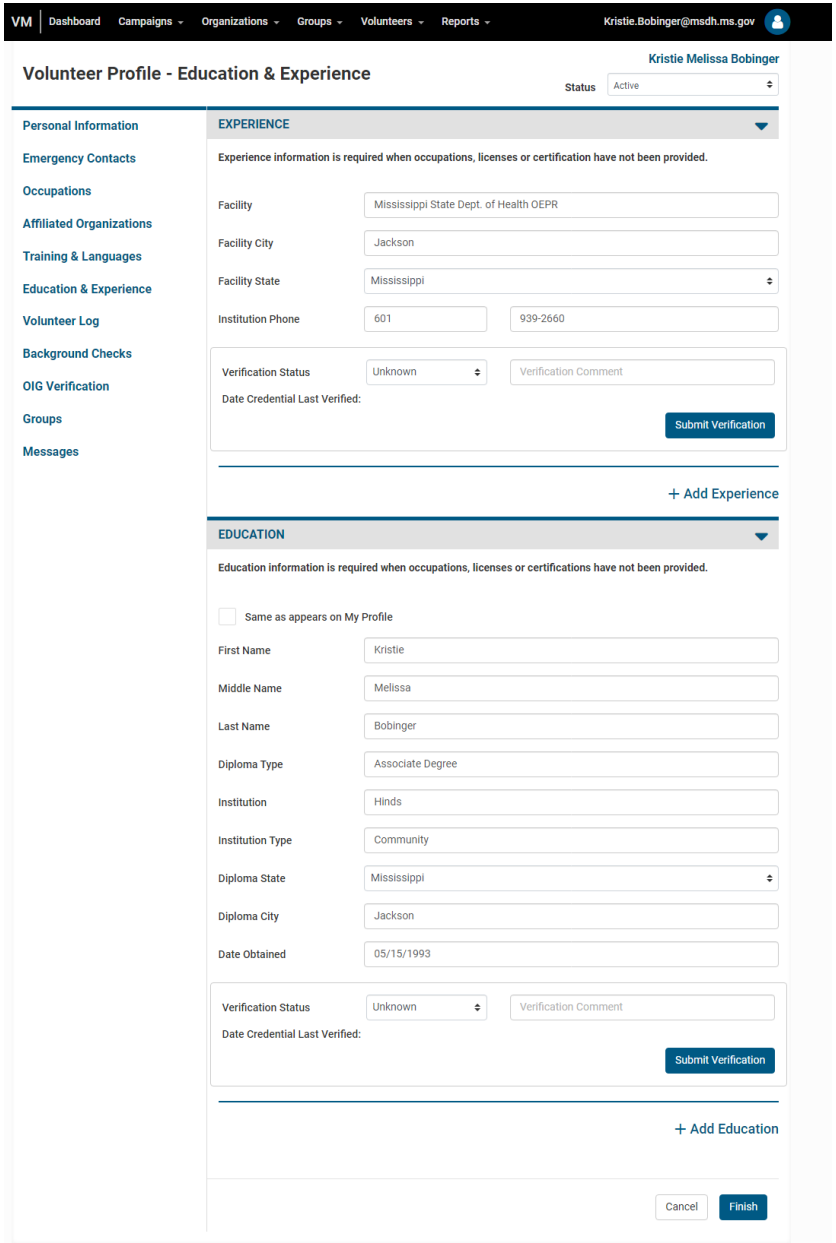


Search for your organization (place of employment),
Select organization then click add.

Complete the disaster training section.



Complete the education field.



Once your profile is complete, we will review it and mark your profile as active. You will receive notifications via your selected contact method. We use the system to notify and deploy volunteers and employees to respond to emergencies and disasters.
